Language

- **English (Intermediate)**

About me

Data professional with experience in Government, Retail, and Banking, focused on Data Engineering, Business Intelligence, AI, and Automation. Skilled in SQL, Power BI, Microsoft Fabric, Azure, Python, SPSS, Power Automate, and DAX. Experienced in turning complex data into clear insights, automated solutions, and reliable business decisions.

Experience

2025-2026 (Now)

CMHL

Data Engineer

Padonmar Stadium (East Wing), Bargayar Street, Sanchaung Township, Yangon

AI & Data Intelligence

- Train and provide business and technical data knowledge to City GPT, the company's internal AI solution.
- Provide City GPT with knowledge of SQL Server, Oracle, database tables, columns, relationships, and business data structures.
- Prepare and maintain data dictionaries, metadata, and database documentation to improve AI understanding of company data.
- Test, validate, and refine AI-generated responses against actual database structures, business rules, and source data.

Data Engineering & Business Intelligence

- Design, develop, and maintain data pipelines to collect, transform, integrate, and prepare data from multiple business sources.
- Build and maintain data and reporting solutions using Microsoft Fabric, Azure, SQL Server, Oracle, Power BI, and Power Query.
- Develop interactive Power BI dashboards and reports to deliver business insights and support management decision-making.
- Develop and maintain DAX measures, semantic data models, and reporting logic to ensure accurate and efficient reporting.
- Ensure data quality, accuracy, consistency, and accessibility for reporting, analytics, and business operations.
- Analyze and resolve data issues across source systems, pipelines, databases, and reporting layers.

Automation & Process Improvement

- Develop and maintain Power Automate workflows for stock adjustments, Finance approvals, notifications, and other departmental processes.
- Identify opportunities to reduce manual work and improve operational efficiency through data analytics, automation, AI, and digital solutions.
- Collaborate with cross-functional teams to streamline business processes and implement scalable data solutions.

Business & Cross-Functional Support

- Collaborate with Finance, Retail Operations, Supply Chain, and other departments to understand business requirements and deliver data, reporting, and automation solutions.
- Act as a central point of contact for data and reporting requirements, coordinating requests from Data Analysts and business teams.
- Provide guidance and support to departmental Data Analysts on data requests, reporting issues, and data practices.
- Review and coordinate cross-departmental data requirements to ensure consistent definitions, reliable data, and accurate reporting.

2025 (Six Months Contract)

Government sector

Data Engineer

Ofiice 27,Nay Pyi Taw

Data Management & Data Engineering

- Gather, integrate, and manage electricity consumption, production, distribution, and billing data from regional and field offices.
- Develop and maintain data pipelines and ETL processes to collect, transform, validate, and consolidate data.
- Maintain databases, data models, and data dictionaries for energy and infrastructure data.
- Ensure data quality, accuracy, completeness, and consistency across reporting units.
- Automate data processing and reporting to improve efficiency and reduce manual work.

Statistical Analysis & Business Intelligence

- Prepare daily, monthly, quarterly, and annual electricity statistics reports.
- Perform statistical analysis using SPSS to identify trends, patterns, and key indicators.
- Create Power BI dashboards, charts, visualizations, and maps for management and policymakers.
- Provide statistical summaries and data-driven insights for government and management reports.
- Monitor data trends and identify data-quality issues affecting reporting.

Policy & Decision Support

- Support evaluation of government energy policies and infrastructure projects using data and statistical analysis.
- Provide data insights for budgeting, tariff setting, energy planning, and rural electrification.
- Collaborate with regional, technical, and government stakeholders to improve data collection and reporting.
- Identify opportunities for data engineering, automation, analytics, and digital solutions.

2024-2025

AYA BANK (LOAN Department) (Head Office)

Data Analyst

No. 416, Mahabandoola Road, Kyauktada Township, Yangon, Myanmar

Loan Data Management & Data Engineering

- Gather, integrate, and consolidate loan data from core banking systems, loan management platforms, and credit bureaus.
- Maintain accurate loan datasets covering customer, repayment, collateral, and portfolio information.
- Develop and maintain data pipelines and SQL queries for daily loan data processing and reporting.
- Ensure data quality, accuracy, completeness, and consistency across loan data sources.
-

Loan Analytics & Business Intelligence

- Process and analyze loan portfolio data using Excel, SQL, Power BI, and Python.
- Perform daily loan processing, NPL monitoring, and dashboard updates.
- Analyze loan portfolio performance, repayment patterns, delinquency trends, and credit risk indicators.
- Monitor key metrics including NPL ratios, recovery rates, and portfolio performance.
- Develop Power BI and Excel dashboards and visualizations for management insights.
- Prepare daily, weekly, and monthly loan performance reports for management.

2023- 2024

CHID BANK (IBD Department) (Head Office)

Data Reporting Associate

(No. 60, Shwedagon Pagoda Road, Nawaday Street , Yawmingyi Ward, Dagon Township, Yangon)

International Banking & Data Management

- Process daily foreign currency exchange transactions using SWIFT and FX Trade systems.
- Collect, manage, and analyze international banking and customer transaction data for reporting.
- Maintain and validate transaction and legal proceeding records and prepare management reports and presentations.
- Create interactive dashboards and visualizations to monitor international banking activities and key trends.
- Ensure data accuracy, consistency, and integrity across banking and reporting datasets.
- Provide data insights to support international banking operations and management decision-making.

2021 - 2023

Kan Thar House Building Accessories

Data reporter

Sagaing

Sales Data & Business Intelligence

- Collect, clean, integrate, and maintain sales, customer, and inventory data from multiple sources.
- Analyze sales performance and product demand for cement, bricks, steel, and other building materials.
- Develop dashboards and reports using Power BI, Excel, and SQL to support management decisions.
- Track and forecast demand to optimize stock levels and reduce excess inventory.
- Analyze market trends, pricing, customer behavior, and competitor activities.
- Provide data-driven insights to support procurement, supplier performance, material costs, pricing, discounts, and promotions.
- Ensure data accuracy, consistency, and integrity across reporting systems.
- Prepare monthly, quarterly, and annual performance reports.
